This article was featured in [One Great Story](#), New York's reading recommendation newsletter. [Sign up here](#) to get it nightly.

Chungin “Roy” Lee stepped onto Columbia University’s campus this past fall and, by his own admission, proceeded to use generative artificial intelligence to cheat on nearly every assignment. As a computer-science major, he depended on AI for his introductory programming classes: “I’d just dump the prompt into ChatGPT and hand in whatever it spat out.” By his rough math, AI wrote 80 percent of every essay he turned in. “At the end, I’d put on the finishing touches. I’d just insert 20 percent of my humanity, my voice, into it,” Lee told me recently.

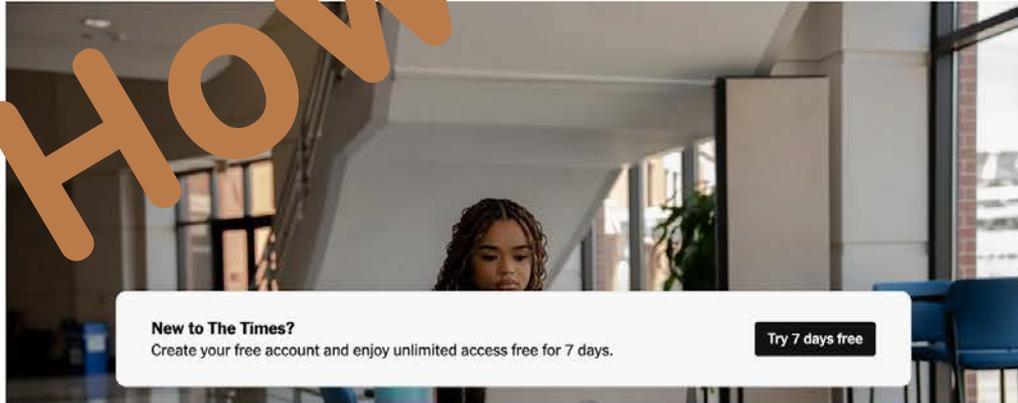

A topographic map with contour lines and elevation markers. The map is partially obscured by a white rounded rectangle containing text. Visible labels include 'Snyder', 'Lake', 'Beaver Creek Falls', and various elevation numbers like 5000, 6000, 7810, 6400, 6200, 6000, 7400, 6800, 6600, 7400, 6200, 6000, 5800, 5600, 5400, 5200, 5000, 4800, 4600, 4400, 4200, 4000, 3800, 3600, 3400, 3200, 3000, 2800, 2600, 2400, 2200, 2000, 1800, 1600, 1400, 1200, 1000, 800, 600, 400, 200, 0. There are also some small numbers like x.565.2, x.4597, x.6804, and 0885.

★ THE HIGHLIGHT ADVICE

My students think it's fine to cheat with AI. Maybe they're onto something.

To save the humanities, we need to rethink our assumptions about AI — and education.

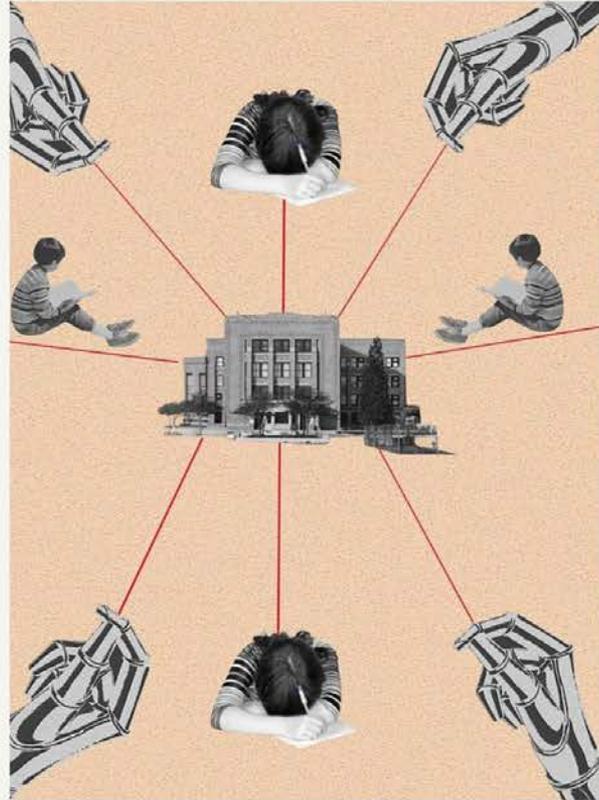

Everyone's Using AI To Cheat at School. That's a Good Thing.

It's not just the college students. I'm a professor—and these AI models offer keener, smarter, and more thorough suggestions than I do.

The Homework Apocalypse

Fall is going to be very different this year. Educators need to be ready.

ETHAN MOLLICK

JUL 01, 2023

360

50

26

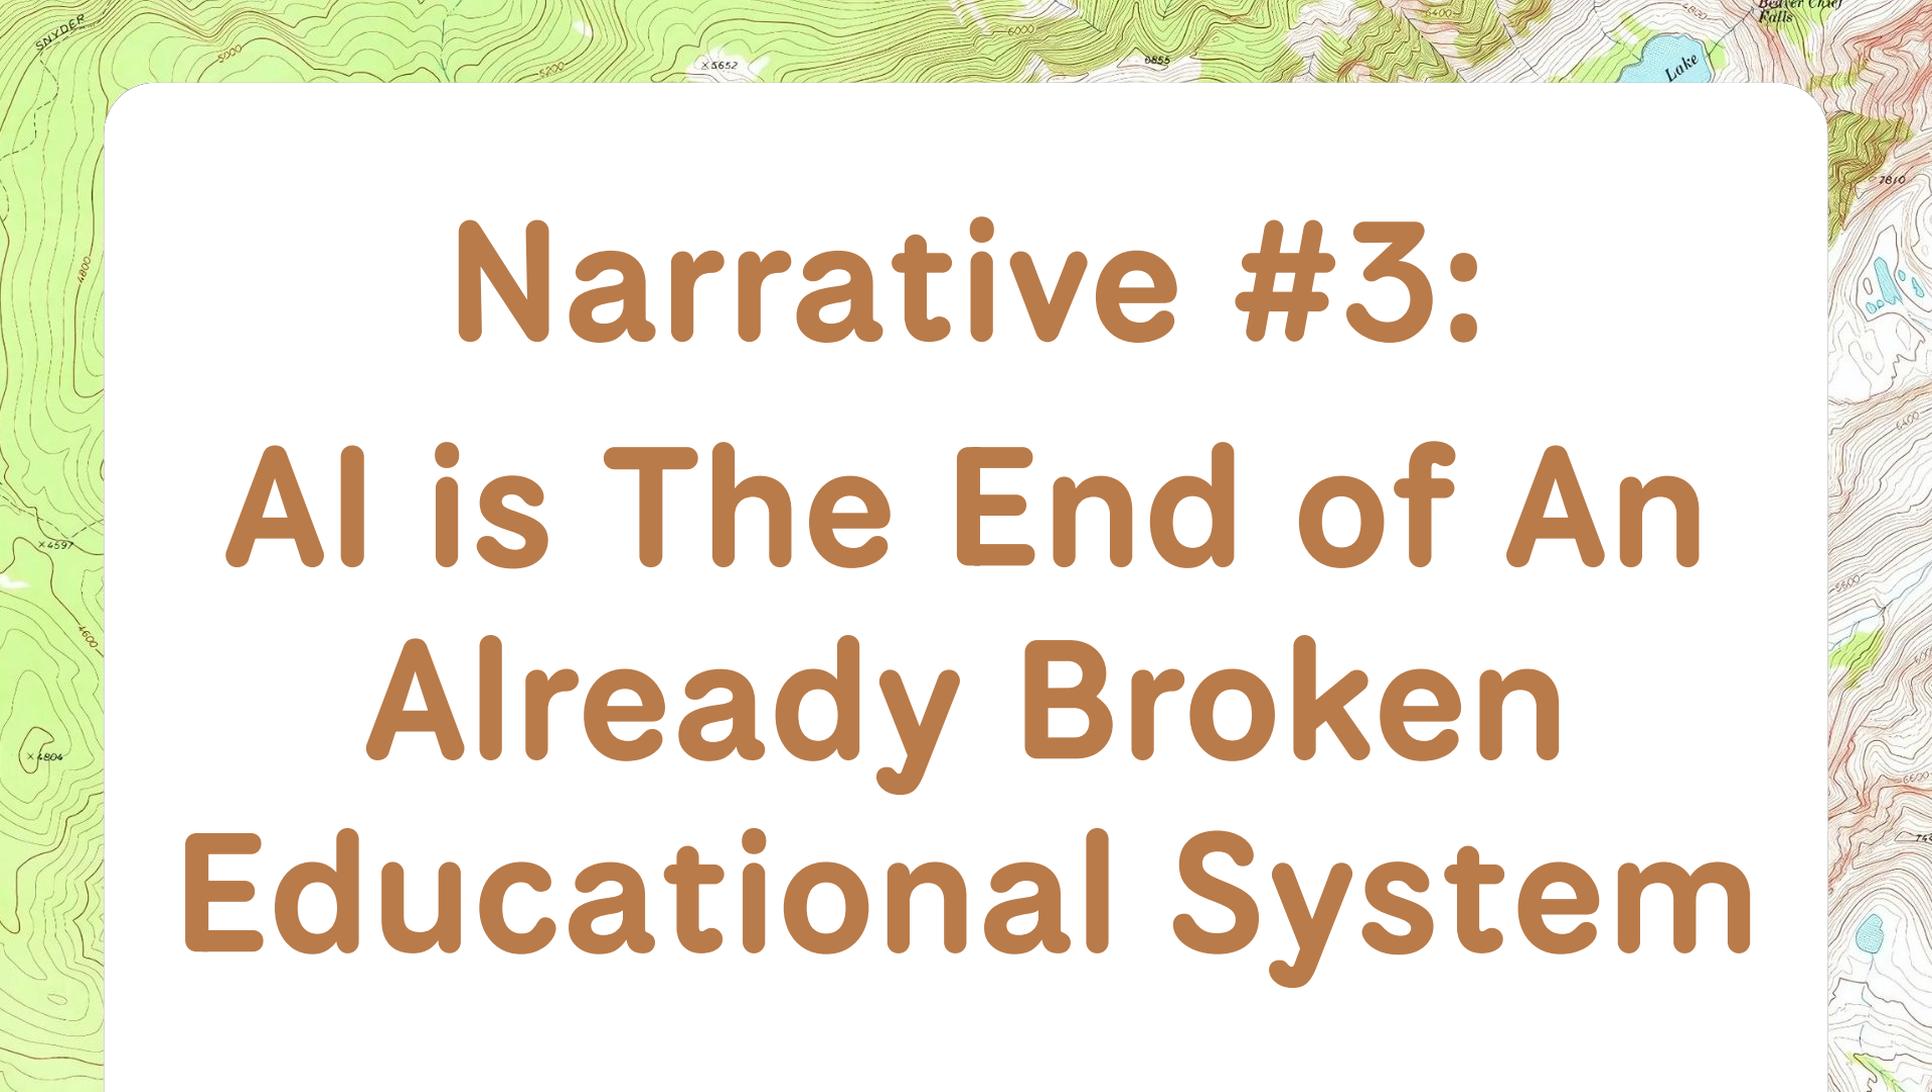

Share

Not enough educators (and parents) are preparing for the Homework Apocalypse that is coming this Fall, as AI becomes ubiquitous among students.

Of course, the ease of cheating with AI is a part of the Homework Apocalypse, but only one part. Cheating was already common in schools. One study of eleven years of college courses found that when students did their homework in 2008, it improved test grades for 86% of them, but only helped 45% of students in 2017. Why? Because over half students were looking up homework answers on the Internet by 2017, so they never got the benefits of homework. And that isn't all. By 2017, 15% of students had paid someone to do an assignment, usually through essay mills online. Before AI, 20,000 people in Kenya earned a living writing essays full-time. Yes, cheating will be easier with AI, but it was easy before, and cheating is not the only reason that AI challenges the idea of homework

Instead, think of how the calculator completely changed what was valuable to teach.

Abstract

This study explores the neural and behavioral consequences of LLM-assisted essay writing. Participants were divided into three groups: LLM, Search Engine, and Brain-only (no tools). Each completed three sessions under the same condition. In a fourth session, LLM users were reassigned to Brain-only group (LLM-to-Brain), and Brain-only users were reassigned to LLM condition (Brain-to-LLM). A total of 54 participants took part in Sessions 1-3, with 18 completing session 4. We used electroencephalography (EEG) to assess cognitive load during essay writing, and analyzed essays

A topographic map with contour lines and elevation markers. The map is partially obscured by a white rounded rectangle containing text. Visible text on the map includes 'SANDER', '5000', '5700', '5652', '6000', '6855', '6400', '6800', 'Lake', 'Beaver Creek Falls', '7810', '6400', '6800', '6200', '6800', '6804', '6200', and '7400'.

Assurance Audit

Digital audit AI

Artificial intelligence has the potential to transform audit, but it will never replace the auditor.

Artificial intelligence (AI) could be a game changer for business generally, and professional services in particular. With the rapid developments in machine learning, data mining and cognitive computing, the next decade promises to see huge leaps forward.

While the excitement over the potential applications of AI is understandable, there are some misconceptions — and indeed fears — developing. Central to that is the fear that AI will in fact replace humans in the value chain — doing the tasks we currently do, but faster and more accurately, and thus rendering many of us redundant.

We need to start with adults.

(Leaders and Policymakers)

"Assuming early studies are true and we see productivity improvements of 20 to 80 percent on various high-value professional tasks, I fear the natural instinct among many managers is 'fire people, save money.' But it does not need to be that way. There are many reasons for companies to not turn efficiency gains into head-count reduction or cost reduction. Companies that figure out how to use their newly productive workforce **should be able to dominate any company** that tries to keep their post-AI output the same as their pre-AI output, just with fewer people."

Ethan Mollick

Ralph J. Roberts Distinguished Faculty Scholar

**What AI can do to
save you time or
support tasks you
already do.**

**What AI means
for bigger
questions about
learning and
schooling.**

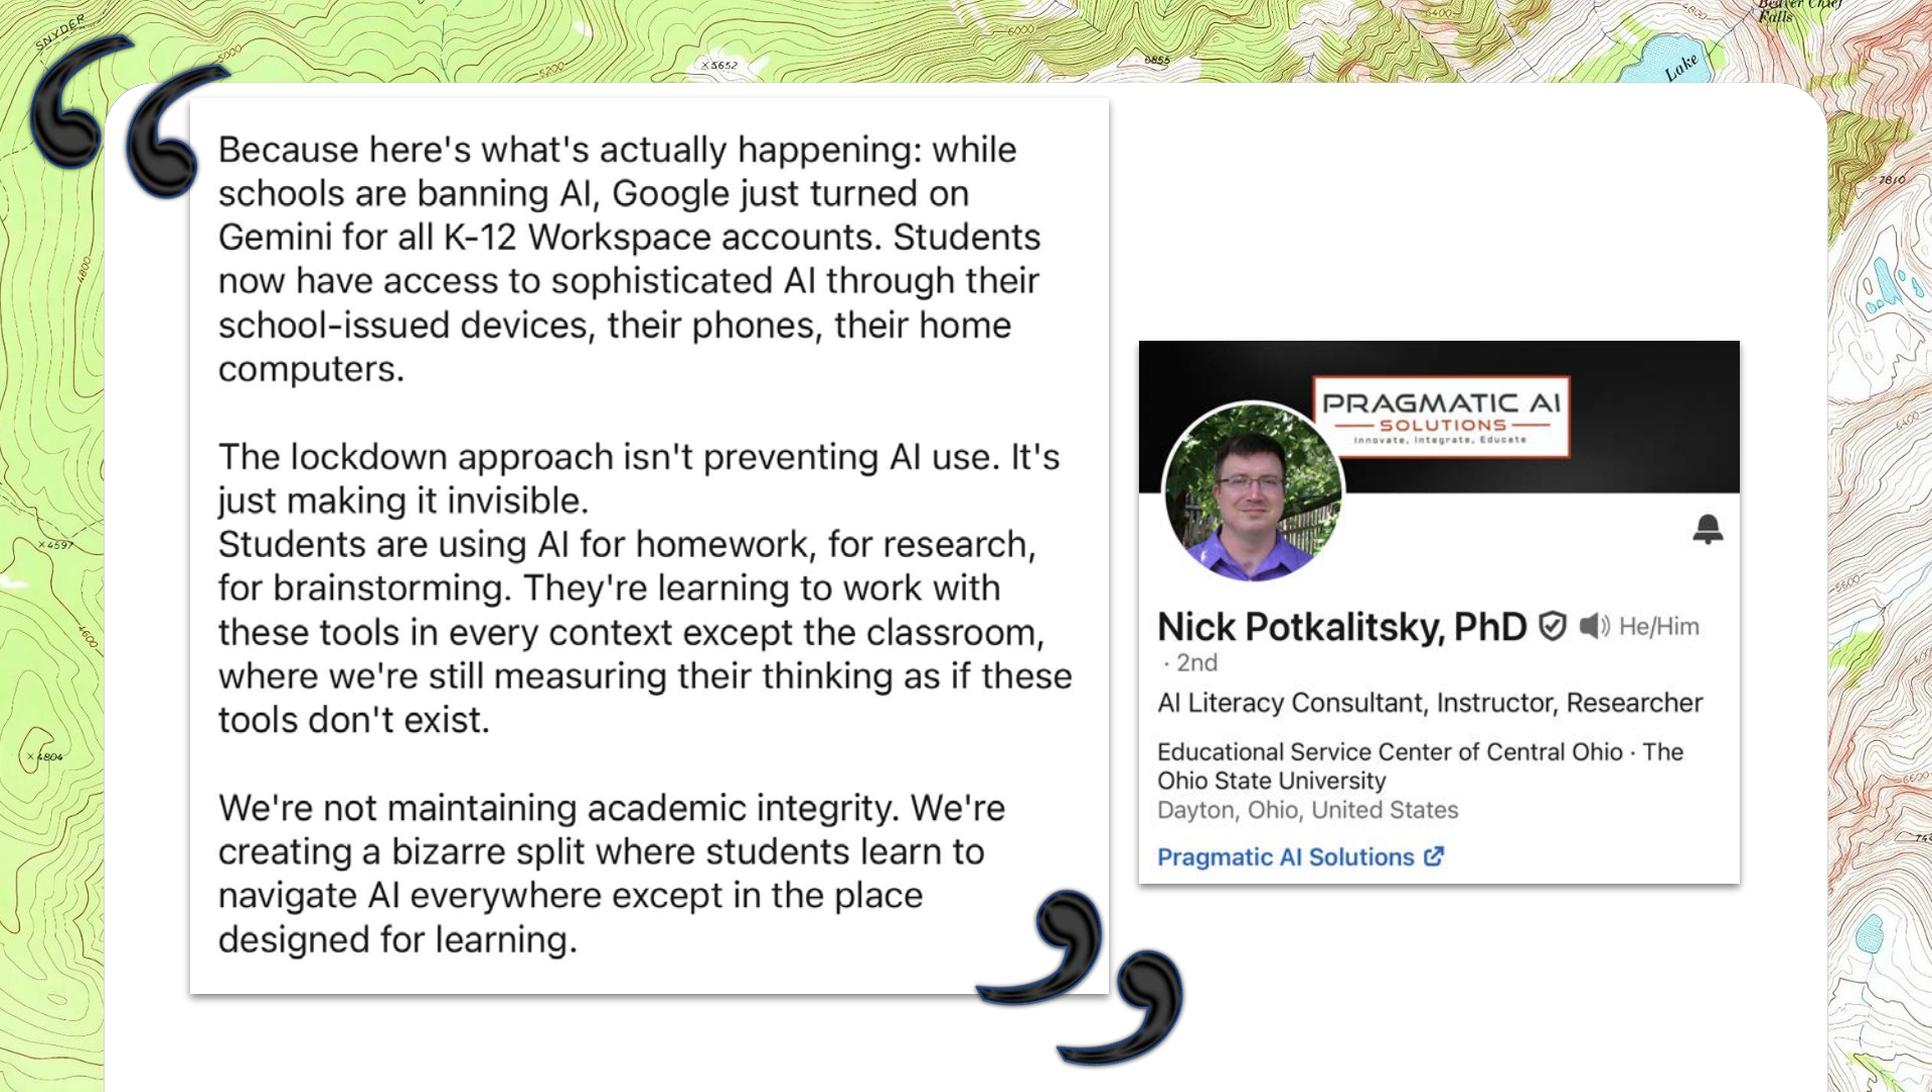

Because here's what's actually happening: while schools are banning AI, Google just turned on Gemini for all K-12 Workspace accounts. Students now have access to sophisticated AI through their school-issued devices, their phones, their home computers.

The lockdown approach isn't preventing AI use. It's just making it invisible.

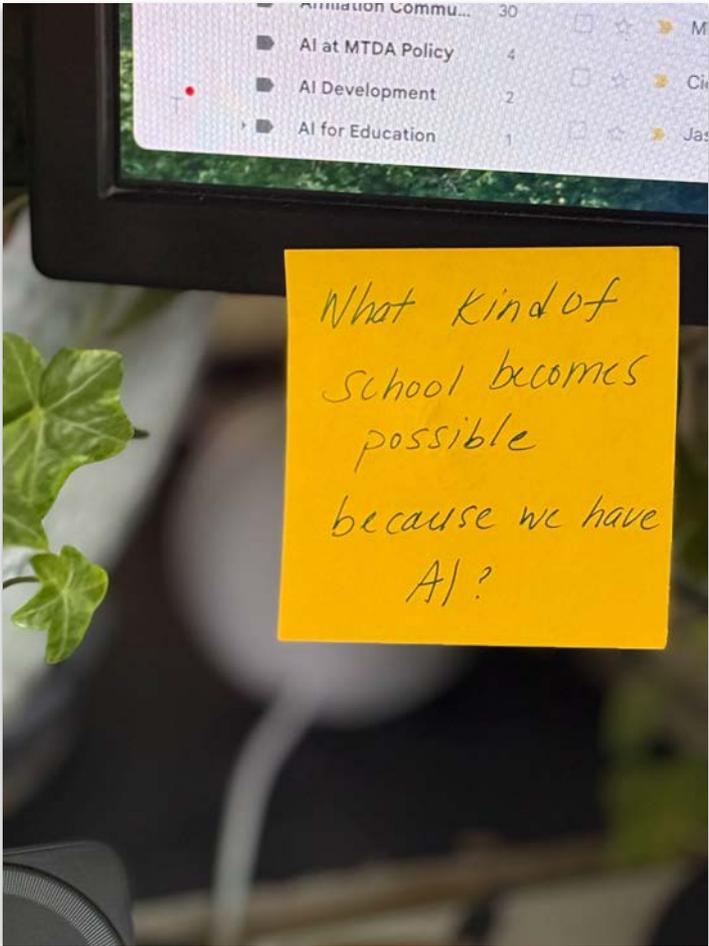

Students are using AI for homework, for research, for brainstorming. They're learning to work with these tools in every context except the classroom, where we're still measuring their thinking as if these tools don't exist.

We're not maintaining academic integrity. We're creating a bizarre split where students learn to navigate AI everywhere except in the place designed for learning.
